

# Basic Task

complexity scale-up

# LOGICWORLD ↗

## Simple Logic

Put the books on the Desk

1. NavigateTo(Book)

2. PickUp(Book)

3. NavigateTo(Desk)

4. PutOn(Desk)

Fixed Goal,  
Sequential Execution

## Complex Logic

IF

$(\text{Exist}(A) \wedge \neg \text{Saw}(B)) \vee \text{Visited}(C) \dots$

IF

$(\text{Saw}(A) \wedge \text{Count}(B, C) \geq 2 \wedge \neg \text{Toggled}(D)) \dots$

Check State

TASK A(3-6 Subtasks)

TASK B(3-6 Subtasks)

ACTION Sequence X

ACTION Sequence Y

Dynamic Goal,  
Non-Linear Branching,  
Requires Real-time State Tracking

## Task Description

Can you take 2 eggs and put them on the dining table? If you see bread, bring it over and put it on the dining table. If there's no bread, take an apple and put it on the desk.

## Goal Verification

$\text{Count}(\text{dining table}, \text{egg}) == 2$   
and  $((\text{Saw}(\text{bread}) \text{ and } \text{Count}(\text{dining table}, \text{bread}) == 1))$  or  
 $(\text{not Saw}(\text{bread}) \text{ and } \text{Count}(\text{desk}, \text{apple}) == 1))$
